Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by
Robertson et al. (US 2002/0178026).

1. As per claim 1, a mobile agent management apparatus comprising: a plurality of agent servers (corresponds to entity servers 2902A and 2902B) and a registration server for maintaining location information mobile agents, (mobile agent approach 0185) and (discover and register with local registrars [0230]) wherein each of said plurality of agent servers comprises: means for maintaining history of movement of each of said mobile agents; (life cycle of cached instances as they move in and out of cache,[0295]) and request means for Periodically generating requests for updating location information of each of said agents to renew ion information at said registration server. (mapping between client application, [0120]) and (updating the enterprise repository with registration information, [0266])
2. As per claim 2, the apparatus wherein each of said agent servers further comprises a counter for accumulating a count of the number of movements of corresponding mobile agents. (a counter is initialized based on the duration time, [0270])

Art Unit: 2143

3. As per claim 3, the apparatus wherein each of said agent servers further comprises comparator means for comparing the in said counter with a predetermined threshold. (corresponds to comparing the type and attributes for the services running in the enterprise, [0270])

4. As per claim 4, the apparatus wherein the request generator of each of said agent servers generates a request to registration server for updating location, information when an accumulated number of movements of a corresponding mobile agent exceeds the predetermined threshold. (corresponds to when the number of services being run exceeds the threshold, [0270])

5. As per claim 5, the apparatus wherein said registration server comprises at least one register for maintaining accumulated number of movements and locations of each of mobile agents in an associated manner and renews said location information of each of mobile agents only upon receipt of requests for updating location information associated with a higher accumulated number of movement. (corresponds to "Run Dispatching Rules", [0532]) and (upon receipt of the work item, [0533])

6. As per claim 6, a method for managing locations of mobile agents by a plurality of agent servers and a registration server for maintaining locations of mobile agents comprising the steps of on each of said agent servers; maintaining history of movement of each of said mobile agents; and (life cycle of cached instances as they move in and out of cache, [0295])

periodically generating requests for updating and deleting registries; and at said registration server, renewing location information of each of said mobile agents kept by said registration server with said requests for updating and deleting. (corresponds to renewing and updating the global lookup with enterprise lead renewal information

7. As per claim 7, the method wherein each of said agent servers accumulates a count of number of movements of corresponding mobile agents. (corresponds to when a counter is initialized, based on the counter time, [0270])

8. As per claim 8, the method further comprising: comparing accumulated number of movements to a threshold number of movements. (corresponds to comparing the

type and attributes for the services running in the enterprise, [0222]) and see also [0270]

9. As per claim 9, the method wherein said generating is done when accumulated number of movements exceeds threshold number of movements. (corresponds to the number of services being run exceeds the threshold, [0270])
